

HOW TO CHOOSE AN ENVIRONMENTALLY FRIENDLY GARAGE DOOR

Nowadays, homeowners have begun exploring the different options available to be more environmentally friendly like purchasing items made of sustainable materials, one such eco-friendly appliance is the garage door. You may be curious about which type of garage door is better for the environment. Let's take a look at some features that makes a garage door eco-friendly.

1

A garage door made of recycled or sustainable material is a recommended option for an eco-friendly lifestyle. Choose one made of wood or recycled metals such as aluminium or steel. Wood is a material that highly supports sustainable and environmentally friendly practices.

MATERIALS

2

Opting for a garage door with good insulation and weatherproofing features will balance the temperature inside the garage as well as lower the energy usage of the air conditioner. A garage door with wooden materials combined with resin or wax are usually well-insulated. Heavy materials like steel tend to be as well.

ENERGY EFFICIENT

3

If the garage door material is high-quality and durable, it will last longer and won't require frequent replacement. Not only cost-effective but also a more sustainable choice.

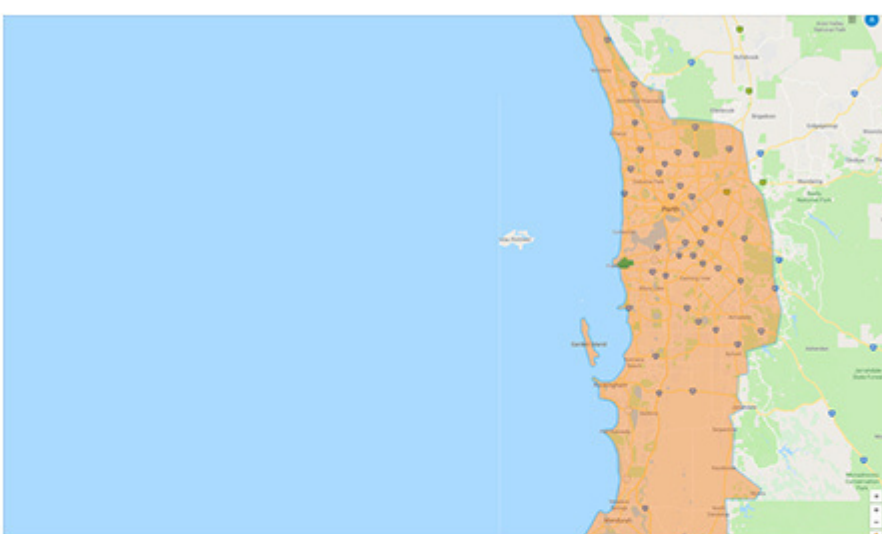

QUALITY & DURABILITY

4

The whole process including selecting the resources, designing the doors, manufacture, quality check and transportation of the products, should be done as efficiently as possible with regard to the environmentally friendly practices.
